ACTIVE EVAPORATION
- Using Evaporation and VOC’s to further heat and evaporate tailings

Transparent dome (cut-away) for the evaporation of tailings (Greenhouse Effect), could be pexiglass, fiberglass or other material

Water evaporates from tailings, running down dome walls and collecting in reservoir for removal

Tank Containing Tailings For Evaporation

VOC capture device(s) sends emissions to Incinerator

Incinerator: Sends heat under Tank

Reservoir: Extends all around the inside of dome
